Art Unit: 2832

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the “intervals among each said plurality of compensating elements”, LA, DA, and DB must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as “amended.” If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled “Replacement Sheet” in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 5 and 14 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. It is not clear what LA or DA are where each

are in terms of silver paste, but “silver paste” lacks antecedent basis. Also ITO is not defined and/or lacks antecedent basis in the claim so that “contact length” between that and silver paste is also not clear. It is not clear what the difference between “line distance” “contact length” and “distance of silver paste pattern are”; i.e, the differences between LA, DA and DB are not clear. The term “comprise the steps of “ is not clear since the claims are product claims.

4. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

5. Claims 1-14 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. It is not clear what the “intervals among each said plurality of compensating elements are” where the term is not defined in the specification sufficiently, and there is no depiction of the term in the figure. That is, there is no depiction or adequate description of intervals between compensating elements 540 in Fig. 5a that decrease toward the middle in size as claimed where the claim recites that the “sizes of ....the intervals among each said plurality of compensating elements are ...inversely proportional to the distances being apart from the edges”. If anything the intervals between elements 540 at the edge appear to be smaller than they are in the middle, so the claim is not described because the intervals are not inversely proportional. It also appears that the etched portions 540’ are not the intervals claimed because they

first get larger, and then get smaller from left to right at Fig. 5A, if one assumes that 540' is on either side of the dotted lines and . For claims 5 and 14, the equation elements DA, LA are not sufficiently described. For reasons noted above, the "line distance", "contact length" and "distance of silver paste pattern are not sufficiently described so that neither is LA, DA and DB.
